

Smart Incident Management System using ServiceNow

1. Project Title

Smart Incident Management System using ServiceNow

2. Introduction

This project automates incident management workflows using ServiceNow ITSM concepts. The system automatically creates incidents, assigns support teams, calculates priority, sends notifications, tracks SLA timelines, and displays reports through dashboards.

3. Objectives

- Automate incident management
- Reduce manual ticket routing
- Improve response tracking
- Monitor support team performance
- Implement real-time ITSM workflows

4. Workflow

User creates incident → Assignment Rule assigns team → Business Rule sets priority → Notification email sent → SLA timer starts → Dashboard tracks incidents

5.Screenshots

Add your screenshots in the placeholders below.

6.Dashboard

The dashboard displays incident analytics, team workload, and open incident reports using charts and visualizations.

7. Conclusion

This project provided practical experience in ServiceNow ITSM, workflow automation, SLA management, reporting, and dashboard creation.
